Generator and Power Conditioning

The turbine drives a generator to produce electricity:

- Types include synchronous and asynchronous generators**
- Power conditioning involves voltage regulation, rectification, and storage if needed**
- Control systems ensure stable output and safety**

Tailrace and Outflow

The tailrace directs water back to the river or stream:

- Design must prevent**

erosion and sediment build-up Proper grading ensures water re-enters the natural watercourse smoothly

Electrical System and Load Management Power Distribution Micro hydro systems often supply local loads: Designing for AC or DC loads depending on application Implementing voltage regulation and protection devices Energy Storage and Backup In case of variable water flow: Batteries or flywheels can store excess energy Hybrid systems may incorporate solar or wind components for reliability
